by CLAUD

Why choose on-site gas production?

Compared with the traditional gas supply in cylinders, the production with a gas generator offers considerable advantages, mainly:

**AUTONOMY
SAFETY**

NO RISKS

**CONTINUITY IN PRODUCTION
SAVINGS**

- independence from suppliers
- generators do not require storage and handling of potentially dangerous high pressure cylinders
- on-site generators operate at low pressures and store small volumes of pressurized gas, eliminating risk of rapid release of gas
- gas supply 24 hours a day, 365 days a year
- produce nitrogen is cheaper than buy it (return on investment in a short time)
